McAfee VirusScan Enterprise Adapter Package

Certified for SAP NetWeaver

Protect your SAP NetWeaver-based applications from malicious threats

A business's critical applications require efficient security mechanisms to protect the processed and stored data. To tackle this, SAP has introduced an interface for virus scanners to protect data inside applications. The interface, called NW-VSI, can be used to provide a virus-scanning service for NetWeaver-based SAP applications. McAfee® VirusScan® Enterprise Adapter integrates McAfee VirusScan Enterprise with SAP NetWeaver®.

Users can scale the solution to their business needs. Depending on the load and the availability requirements, one or more scanning servers can be connected. No further software needs to be installed on the SAP NetWeaver servers when the scanners are installed on separate Windows®-based systems.

Manage Your Security

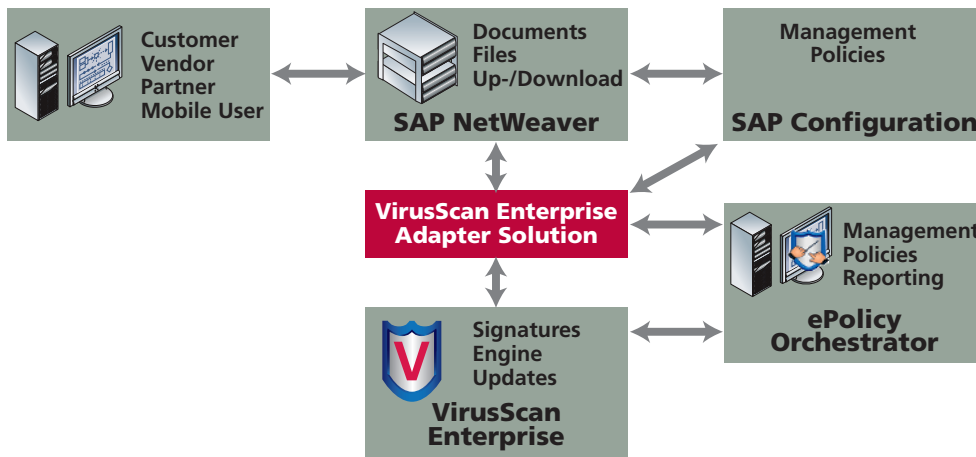

For updating and reporting purposes, the enhanced McAfee ePolicy Orchestrator® (ePO™) agent integrates the scanning server with the centralized anti-virus management console ePolicy Orchestrator. It is also possible to manage the VirusScan Enterprise Adapter through the SAP interface, without ePolicy Orchestrator.

Automatic Updates

Virus security products are only as good as their most recent updates. With VirusScan Enterprise and VirusScan Enterprise Adapter, automatic daily updates ensure that your NetWeaver scan servers are always up to date with the latest McAfee DAT files and scan engines.

Package Content

VirusScan Enterprise Adapter Package implements a connection between scan servers with VirusScan Enterprise installed and SAP NetWeaver systems. The package includes up to two days onsite implementation and training (travel expenses will be charged extra), documentation, and the required tools for connecting VirusScan Enterprise to SAP's NetWeaver VirusScan API (NW-VSI) to scan documents through SAP's NetWeaver VirusScan API. This is an add-on to the VirusScan Enterprise installation and will be managed by SAP configuration, or through ePolicy Orchestrator.

Data Sheet

System Requirements

The following are general system requirements and may vary depending on the nature of your environment:

- SAP NetWeaver (Kernel 6.40 or 7.00)
- Scan servers: Windows 2000/2003 server English or German, 32/64-Bit
- McAfee VirusScan Enterprise 8.xi installed on the scan servers
- Recommended: ePolicy Orchestrator 3.6 or higher for management and reporting

This solution is only available as a McAfee Professional Services solution package.
