PA DSS SERVICES

PA DSS SERVICES - WHAT IS IT?

PA DSS (Payment Application Data Security Standard) define security requirements and assessment procedures for software vendors of payment applications. They allow you to see your organization through the lens of an objective third party – and therefore to compensate for ‘blind spots’ and weaknesses in procedures and systems.

WHY DO I NEED PA DSS SERVICES?

If you are a vendor developing payment application and you want it to be evaluated against PA DSS requirements by a valid PA DSS QSA so you can assure your clients that you are providing secure payment software, then this is what you are looking for.

WHEN DO I NEED IT?

When you are developing payment applications used by 3rd parties and you want to assure them that application is PA DSS compliant. This will help your clients ease the way towards their PCI DSS compliance.
